FINAL REFINEMENT

Tip Selection Experiment

- Four Test Cases
 - Slider snaps to 1% increments
 - Slider snaps to 5% increments
 - Slider snaps to values that make each person's tip convenient to pay with cash
 - Slider snaps to tip values that make each person's total bill convenient to pay with cash
- Observed ability to select desired tip amount and time taken to select desired tip

Babson Interview

Who

The Person Is

- Babson student
- Non Designer
- Complementary Personality
- Non-iPhone user

What

The Product is Used For

- Scenario based walkthrough of prototype
- Non-Scenario based tip selection experiment

Context

Of Feedback Session

- Final Prototype
- Close Friend
- Conducted at Babson in a friendly situation

Observations

Usability Test

Tip Experiment

Technical
Issues

Who

Struggled with dragging and
keyboard layouts

Context

Tip selector did not afford
sliding on computer

Personality

Who

Context

Did not suggest interface
changes despite struggling

Who

Focuses on whether it
works not how well it
works

Scenarios

Context

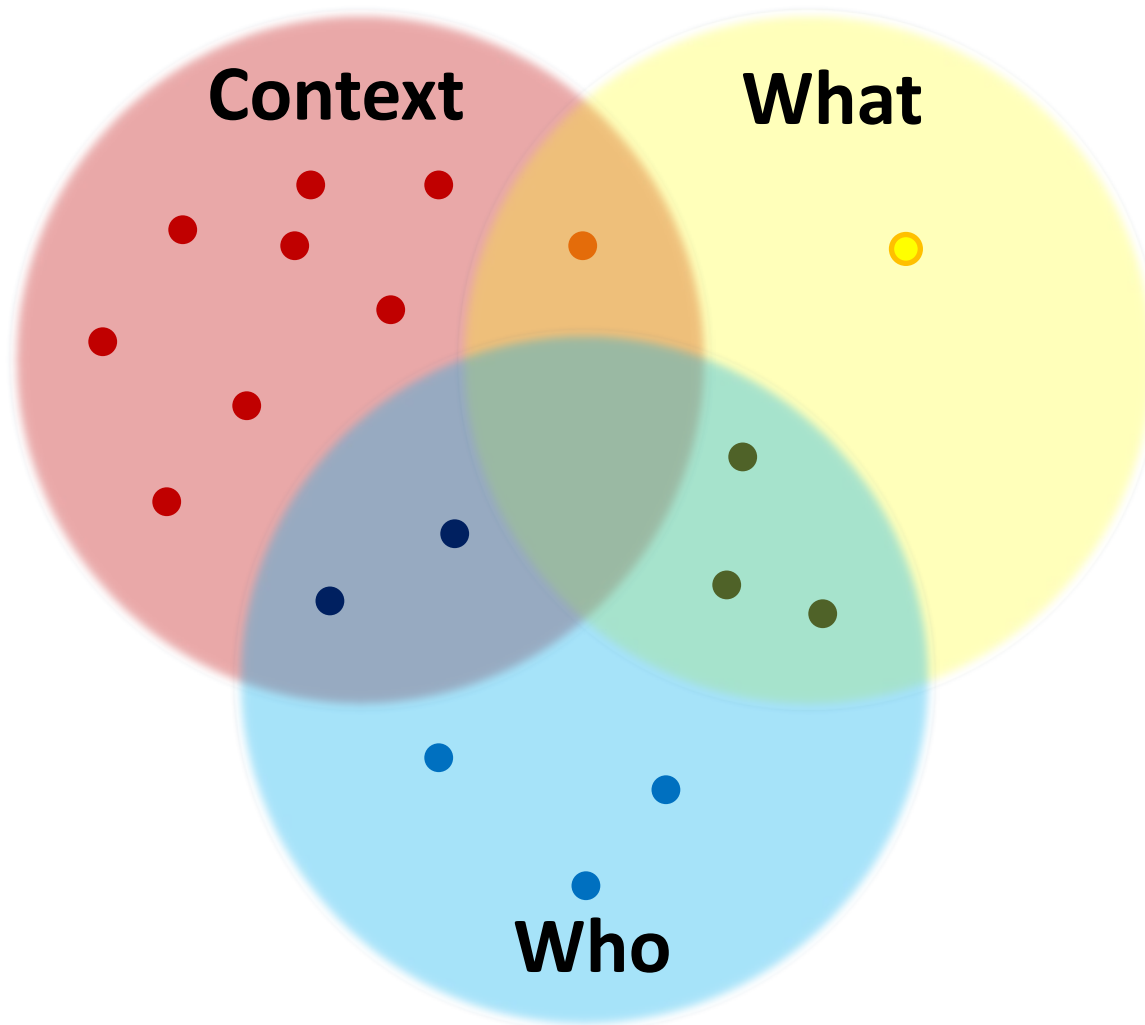

Feedback based on what
he was told to do, not what
he wanted to do.

Who

Context

Let user identify “What’s
Important”

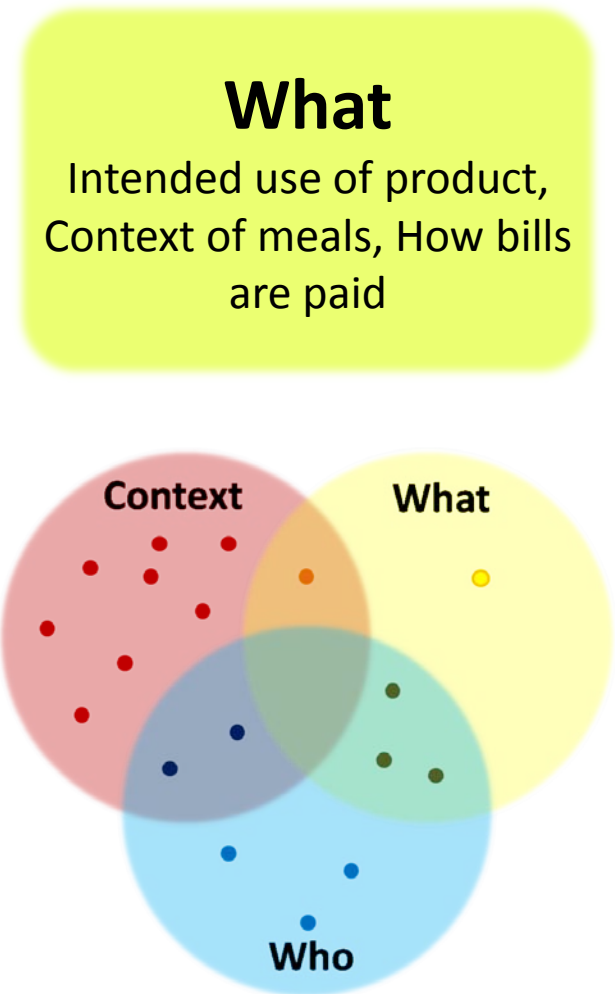

Results

- Identified 18 instances of “Analysis of External Input”
- Categorized based on the main bias corrected for

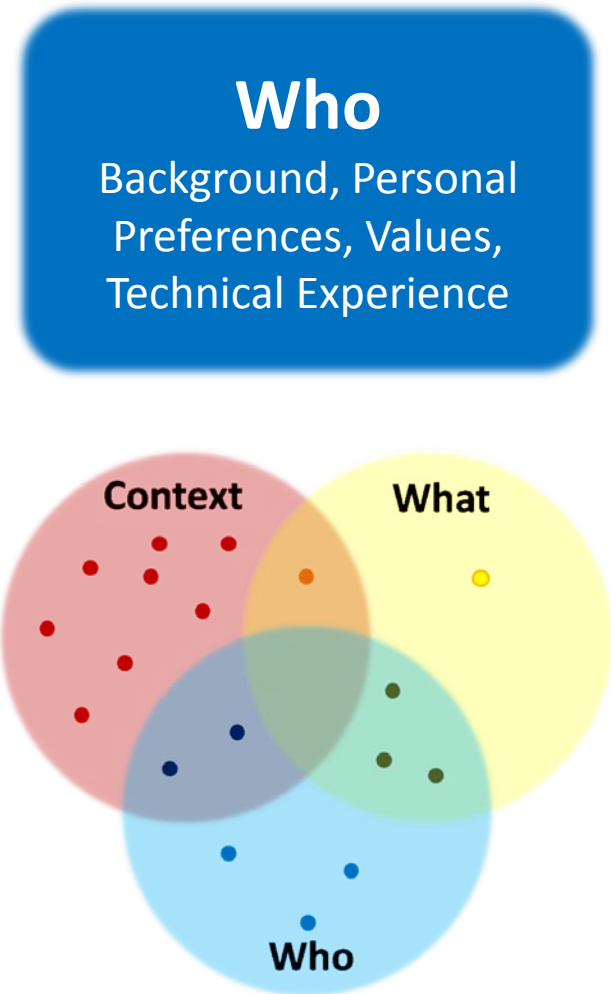

What The Product is Used For

- 5 Instances
 - Heavily influenced by use of scenarios
- Main Sources of Bias
 - Occurred in “Tip Experiment”
- Merged results towards scenarios- based on observations

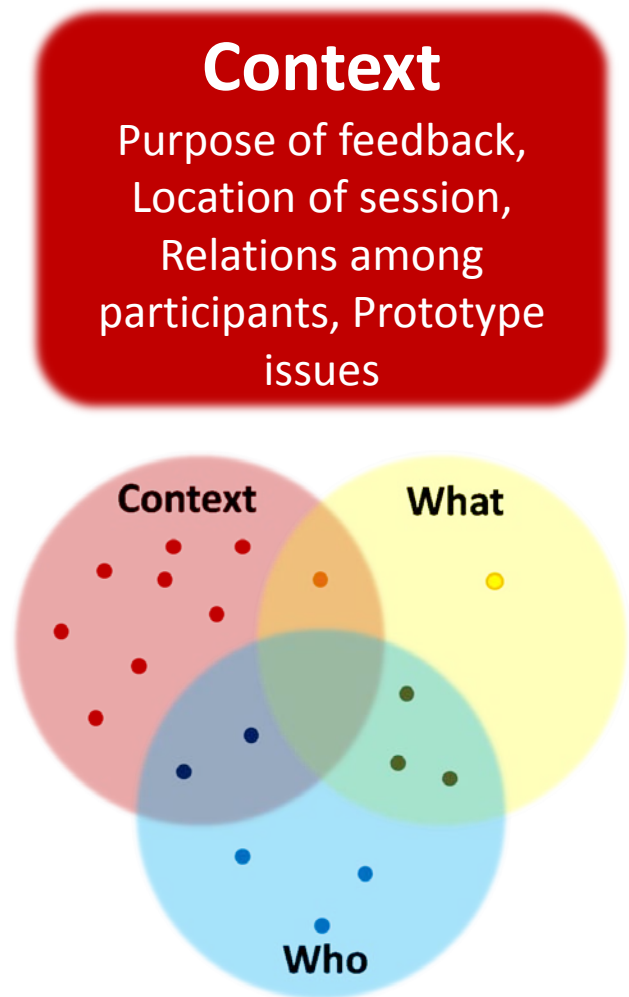

Who The Person Is

- 8 Instances
 - Influenced by use of scenarios
- Main Sources of Bias
 - Technical Knowledge (iPhone Specific)
 - Background of Individual (Designer vs Non-designer)
- Merged results towards that of personas

Context of Feedback Session

- 11 Instances
- Main Sources of Bias
 - Type of Prototype
 - Platform of Prototype (Computer vs iPhone)
 - Purpose of Feedback
 - Location of session
